Welcome to the OpenAl Developer Forum!

What to know before posting a new question:

- 1. Search the forum for similar topics the question might have been discussed before.
- If the question relates account issues (e.g., billing and login issues), please contact us through our Help Center.
- 3. Please be kind and helpful in conversations!

Implementing our own RLHF?

dominique.lahaix

Jun 14

Hi, has anyone implemented its own RLFH process? Wondering whether to

- build a new model with the annotated human verified answers AND
- ask ChatGPT to generate multiple responses (with explanations) AND
- pick the one that gets the better score from the RLFH model

or whether I should just build an embedding DB with the annotated data and enrich the prompt.

Anyone having tried this?

Thanks

sps P Regular

Hi @dominique.lahaix

I think you will find this **recent MS Build session by Andrej Karpathy** helpful.

Just FYI, it's RLHF.

Using the correct acronym will help ensure you get better results.

Oops - should use ChatGPT for typos 😌
